1 Usage Log

Using the SAP Networked Logistics Hub [Usage Log](#) application, the platform service provider can generate usage information for all the hubs and associated business partners, users, and devices within each hub for the billing purposes. The application details the number of business partners, users, and the telematic units and devices used by the business partners within a stipulated time frame. The time frame can range from the current month to the last quarter. Using the [Custom Range](#) option, you can also enter a date range. By default, the [Usage Log](#) page displays the details of the current month.

In short, the application helps the platform service provider in compiling a report about the number of users and telematic units used by the business partners over a period of time within the hub. This report is compiled for Telematic Data Provider (TSI).

Note

The [Usage Log](#) application is visible only to the platform service provider.

The page also provides details about the number of business partners to be excluded from the report. The report can be downloaded to a .csv file.

Business Value

- Compile report for TSI

Available Features

- View all ports in the system
